Teacher Education-Today & Tomorrow

In independent India, experimentation in Teacher Education started as early as in 1961 with the emergence of NCERT at the national level. In the emerging knowledge society the content and process of teacher education has to strike a balance between theoretical and practical, technological and human inputs, global and local requirements as well as philosophical and psychological. The prevailing secondary education programme popularly known as the B.Ed. Programme is facing many challenges in recent years. It probably requires modifications in terms of duration, content and the delivery system. It is now being felt that some innovative ideas be considered to make the system more effective and efficient.

Today we require a new generation of teachers nay managers or facilitators who can create intellectually strong, creatively inclined and versatile workforce. A paradigm shift is required from authoritarian teaching to joyful, active, participative and democratic learning.

Rich experimental experiences are available within the country that need to be looked into carefully to evolve alternative models of teacher education that can take care of the needs of the 21st century.

Theme:Teacher Education- Today & Tomorrow Sub themes:
